I think this looks good. I wonder if your general overview will need that much room but that'll be a decision once you get to that stage. I like the stagger effect with your visuals and comments. That helps break it up, but make sure its really obvious which comment goes with which visual somehow.

I like the dashboard that you have here. I especially like having some comments right next to the visualizations. I would personally keep it to a couple insights into what is being shown on the visualization. I like how you give an intro, show the information, and then conclude at the bottom of the dashboard. might have to use that same system with mine 😊

Just make sure it has a consistent flow, each visualization building on the last to tell a story of your dataset.

Based on the feedback given by Cory and Aaron, we will be sure to keep the comments about our visuals concise and possibly color code them in some way so that it is easy to distinguish which comments go with which visuals. We will also make sure that our general overview doesn't detract from the overall dashboard.
