I like the idea of the pie chart, as long as there is not too many different categories, also need to make sure that every category has some decent amount of representation in the pie chart

Otherwise you could just make it a bar chart

Cool. Feedback:
Pie chart works if there's 4 or 5 wedges, any more than that consider a bar chart.
is there any benefit to showing that there might be 120 attributes? maybe just stick with the first 5 columns.
